DERMATOPATH W DERM CONSULT	DERMATOLOGY CONSULTATION
----------------------------	--------------------------

Test	Result	Reference Range	Flag	Bar Graph
DERMATOLOGIST COMMENT	Dermatology Accession:E9191530			

Patient: SCHWARZ,WILSON 1 YO M POODLE

Clinical consultation:

Thank you for the submitted dermatology history form. The skin biopsies are normal. Absence of lesions of sebaceous adenitis (SA) at this time does not rule out the possibility that this dog will develop the disease at a later time. SA can be a difficult diagnosis to make as the symptoms vary by breed, the symptoms are similar to those of other diseases such as hypothyroidism or allergies, and the disease can vary greatly in its severity. Clinically, lesions of SA are characterized by mild to severe scaling and alopecia. The alopecia can be patchy or affect large areas; the remaining hair within affected areas is often brittle or coarse. Often there is a "candle wax" type adherence of follicular debris to the base of the hairs. Some dogs affected with SA can be subclinical and show no outward signs of the disease. Unfortunately, there is no DNA test currently available to genotypically detect SA. Currently, diagnosis is based on skin biopsy samples, and this current screening method may result in false negatives. Because the age of onset varies, and since this is only a phenotypic test reflecting a point in time, retesting is recommended every 1 to 2 years for dogs used in breeding programs (recommendation from the OFA SA database registration program).

The Seal of The American Kennel Club affixed hereto certifies that this pedigree was compiled from official Stud Book records on April 3, 2015.

July 9, 2015

I examined a one year old male Standard Poodle today named, "Wilson" belonging to Karla Schwarz for physical exam and orthopedic evaluation.

Overall physical exam was normal including chest auscultation of heart & lungs. Palpation of hips, knees, hocks and elbows were normal.

A skin biopsy sample was submitted for routine screening purposes and hip & elbow radiographs submitted for OFA evaluation.
