| Call Name: | Abner | Laboratory #: | 110228 |
| Registered Name: | - | Registration #: | - |
| Breed: | Goldendoodle | Certificate Date: | Dec. 19, 2018 |
| Sex: | Male | | |
| DOB: | Aug. 2018 | | |

This canine's DNA showed the following genotype(s):

| Disease | Gene | Genotype | Interpretation |
|--|---------------|-----------------|-----------------------|
| Degenerative Myelopathy | <i>SOD1</i> | WT/WT | Normal (clear) |
| Ichthyosis (Golden Retriever Type) | <i>PNPLA1</i> | WT/WT | Normal (clear) |
| Neonatal Encephalopathy with Seizures | <i>ATF2</i> | WT/WT | Normal (clear) |
| Progressive Retinal Atrophy, Golden Retriever 1 | <i>SLC4A3</i> | WT/WT | Normal (clear) |
| Progressive Retinal Atrophy, Golden Retriever 2 | <i>TTC8</i> | WT/WT | Normal (clear) |
| Progressive Retinal Atrophy, Progressive Rod-Cone Degeneration | <i>PRCD</i> | WT/WT | Normal (clear) |
| Von Willebrand Disease I | <i>VWF</i> | WT/WT | Normal (clear) |

WT, wild type (normal); M, mutant; Y, Y chromosome (male)

Helen F Smith, PhD
 Assistant Laboratory Director

Casey R Carl, DVM
 Associate Medical Director

Paw Print Genetics® performed the tests listed on this dog. See the Laboratory Report for interpretation and recommendations based on these findings. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the tests' accuracy and precision. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results. Genetic counseling is available at Paw Print Genetics.

Patient Information

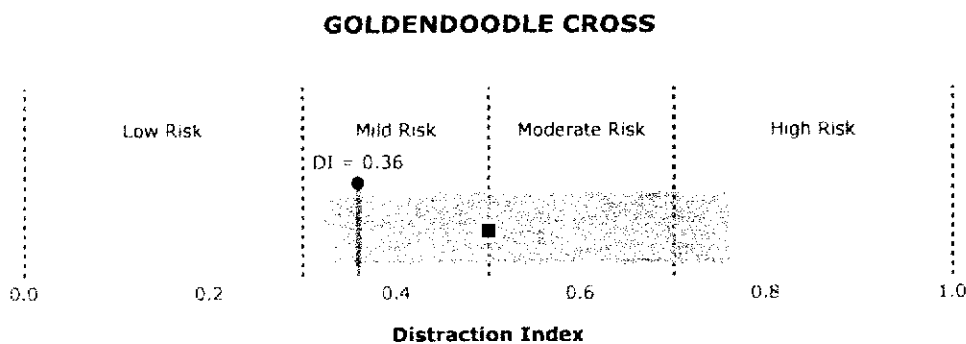

| | |
|---|---|
| Client: Schwarz, Karla Patient Name: <u>Abner</u> Reg. Name: RENDEZVOUS ABNER DOUBLEDAY PennHIP Num: 135822 Species: Canine Date of Birth: 30 Aug 2018 Sex: Male Date of Study: 17 Oct 2019 Date of Report: 23 Oct 2019 | Tattoo Num: Patient ID: 104497 Registration Num: TLM05124221 Microchip Num: 981020027376428 Breed: GOLDENDOODLE CROSS Age: 14 months Weight: 48 lbs/21.8 kgs Date Submitted: 18 Oct 2019 |
|---|---|

Findings

Distraction Index (DI): Right DI = 0.36, Left DI = 0.35.
Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.36.
OA Risk Category: The DI is between 0.31 and 0.49. This patient is at mild risk for hip OA.
Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 1517 canine patients of the GOLDENDOODLE CROSS breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.76) for the breed. The breed average DI is 0.50 (solid square). The patient DI is the solid circle (0.36).

SUMMARY: The degree of laxity (DI = 0.36) falls within the central 90% range of DIs for the breed. This amount of hip laxity places the hip at a mild risk to develop hip OA. **No radiographic evidence of OA for either hip.**
