Evaluations of Animals less than 12 months of age can be performed for private use of the owner.
However, certification will not be possible at this age.

OFA recommends that the test be repeated when the animal reaches 12 months of age.

Test: CARDIAC

Results: NORMAL - CARDIOLOGIST

Paw Print Genetics® performed the tests listed on this dog. See the Laboratory Report for interpretation and recommendations based on these findings. The genes/diseases reported here were selected by the client. Normal results do not exclude inherited mutations not tested in these or other genes that may cause medical problems or may be passed on to offspring. These tests were developed and their performance determined by Paw Print Genetics. This laboratory has established and verified the tests' accuracy and precision. Because all tests performed are DNA-based, rare genomic variations may interfere with the performance of some tests producing false results. If you think these results are in error, please contact the laboratory immediately for further evaluation. In the event of a valid dispute of results claim, Paw Print Genetics will do its best to resolve such a claim to the customer's satisfaction. If no resolution is possible after investigation by Paw Print Genetics with the cooperation of the customer, the extent of the customer's sole remedy is a refund of the fee paid. In no event shall Paw Print Genetics be liable for indirect, consequential or incidental damages of any kind. Any claim must be asserted within 60 days of the report of the test results. Genetic counseling is available at Paw Print Genetics.

Re: "Darla" Schwarz
Female Goldendoodle
DOB: 3/14/17

PennHIP series taken under TMDex/isoflurane anesthesia - hips look good;
will send out for formal evaluation and scoring.

Flexed lateral elbow films taken - both left & right are normal.

Palpated both stifle joints under anesthesia - no patellar instability found.

Patient Information

Client: Schwarz, Karla
 Patient Name: Darla
 Reg. Name: Darla
 PennHIP Num: 124296
 Species: Canine
 Date of Birth: 14 Mar 2017
 Sex: Female
 Date of Study: 15 Nov 2018
 Date of Report: 15 Nov 2018

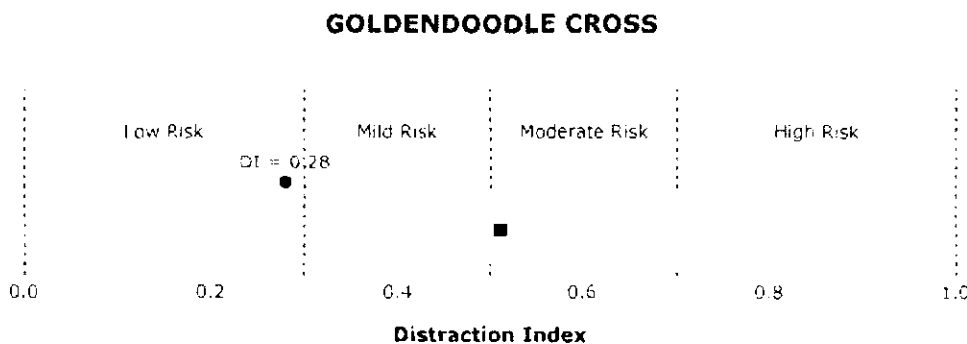

Tattoo Num:
 Patient ID: 101517
 Registration Num:
 Microchip Num: 985112009396957
 Breed: GOLDENDOODLE CROSS
 Age: 20 months
 Weight: 26 lbs/11.8 kgs
 Date Submitted: 15 Nov 2018

Findings

Distraction Index (DI): Right DI = 0.26, Left DI = 0.28.
 Osteoarthritis (OA): **No radiographic evidence of OA for either hip.**
 Cavitation/Other Findings: No cavitation present.

Interpretation

Distraction Index (DI): The laxity ranking is based on the hip with the greater laxity (larger DI). In this case the DI used is 0.28.
 OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.
 Distraction Index Chart:

BREED STATISTICS: This interpretation is based on a cross-section of 1266 canine patients of the GOLDENDOODLE CROSS breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.32 - 0.77) for the breed. The breed average DI is 0.51 (solid square). The patient DI is the solid circle (0.28).

SUMMARY: The degree of laxity (DI = 0.28) ranks the hip within the tightest 5% of DIs for the breed. This amount of hip laxity places the hip at a minimal risk to develop hip OA. **No radiographic evidence of OA for either hip.**
